

Assignment-6: Dictionary in Python

1. Write a program to calculate the sum of all keys in the dictionary
`d = {1: 1, 2: 2, 3: 3, 4: 4}`
2. Write a program to calculate the sum of all values in the dictionary
`d = {1: 1, 2: 2, 3: 3, 4: 4}`
3. Write a program to calculate the sum of both keys and values in the dictionary
`d = {1: 1, 2: 2, 3: 3, 4: 4}`
4. Create an empty dictionary called `user_data`.
Allow the user to enter key-value pairs until they choose to stop.
Print the final dictionary.
5. Write a program to calculate the total score of all students
`student_score = {1: 44, 2: 45, 3: 55}`
6. Write a program to separate odd and even keys from a dictionary.
Also count the total number of odd keys and even keys.
7. Write a program to find the greatest key in the dictionary
`player = {7: "Dhoni", 12: "Kohli", 9: "Rohit", 89: "Bumrah"}`
8. Write a program to extract alternate key-value pairs from the dictionary
`player = {7: "Dhoni", 12: "Kohli", 9: "Rohit", 89: "Bumrah"}`
9. Write a program to find all values that start with the letter 'K'
`player = {7: "Dhoni", 12: "Kohli", 9: "Rohit", 89: "Bumrah"}`
10. Write a program to merge two dictionaries
`d1 = {1: "a", 2: "b"}`
`d2 = {3: "c", 4: "d"}`
11. Write a program to check whether a given key exists in the dictionary
`d = {1: 100, 2: 200, 3: 300}`

12. Write a program to find the minimum value in the dictionary
`marks = {"A": 85, "B": 90, "C": 75, "D": 95}`
13. Write a program to find the maximum value in the dictionary
`marks = {"A": 85, "B": 90, "C": 75, "D": 95}`
14. Write a program to swap keys and values in the dictionary
`d = {1: "one", 2: "two", 3: "three"}`
15. Write a program to remove a specific key (for example, key = 2) from the dictionary
`d = {1: 10, 2: 20, 3: 30}`
16. Write a program to count the frequency of each character in a string using a dictionary.
Example: `"banana"`
17. Write a program to create a dictionary where keys are numbers from 1 to 5 and values are their squares.
18. Write a program to find the total number of items in the dictionary
`d = {"apple": 5, "banana": 7, "cherry": 3}`
19. Write a program to sort a dictionary by its keys
`d = {3: "three", 1: "one", 2: "two"}`
20. Write a program to count how many values are greater than 50 in a dictionary.
21. Write a program to find the key with the highest value in a dictionary.
22. Write a program to update a value in a dictionary if the key exists; otherwise, add the key.
23. Write a program to convert two lists into a dictionary
Example: keys = `[1, 2, 3]`, values = `["a", "b", "c"]`
24. Write a program to remove duplicate values from a dictionary.
25. Write a program to check whether all values in a dictionary are unique.
